Assignment 1017 Feedback

Thomas E. Bramanti   *jadengore*

3a — Your work shows a good deal of understanding on how user interfaces are constructed. Layouts are clean and the overall user interface you've built is decently navigable. Your use of icons is noted and works well here. (**+**)

3c — MVC is largely well-maintained here, except for a single "leak" where you have a `style` element lurking in *character.html*, plus an understandable yet "there-is-a-better-way" use of `script` elements with `document.write` in them. Nothing in that `style` block keeps it from being mentioned separately in CSS, plus the use of `document.write` injects Controller code into the Model file and makes things harder to maintain going forward. Things are otherwise fairly clean. (**|**)

4a — Your mock interface is sufficiently functional, including the nice clean help modals and the assorted other "moving parts" on your web page. There are little inline comments available for more pinpoint details about your coding style. (**+**)

4b — Separation of concerns is generally done correctly with a couple of small issues, as already mentioned in *3c*. (**|**)

4c — You show some good discipline with formatting and indenting your code. Things are nice and readable, and your indentation largely reflects the structure of your code. (**+**)

4d — Your work shows good use of documentation and resources that were either available directly to you or "through the grapevine" (e.g., "Don't use center!") **:)** (**+**)

4e — You committed your work with good frequency and informative messages. Keep it up! (**+**)

4f — Submitted to GitHub on time; *my.cs.lmu.edu* site also live at time of grading. (**+**)
